

NAME

ranonymize – anonymize **argus(8)** data fields.

COPYRIGHT

Copyright (c) 2000-2011 QoSient. All rights reserved.

SYNOPSIS

ranonymize [-f **anonymize.conf**] [**raoptions**]

DESCRIPTION

Ranonymize reads **argus** data from an *argus-data* source, strips out specific fields, and anonymizes the remaining fields in Argus records, including the network addresses, protocol specific port numbers, time-stamps, transaction reference numbers, TCP base sequence numbers, IP identifiers, and any record sequence numbers.

Anonymization is controlled through an anonymization configuration file. See **ranonymize(5)** for a complete description.

OPTIONS

Ranonymize, shares all the same options as **ra(1)**. See **ra(1)** for a complete description of **ra options**. **ranonymize(1)** specific options are:

-f anonymization.conf
